

STEEL POLES

SQUARE & ROUND STRAIGHT

PRODUCT DESCRIPTION:

Steel poles available for use with our full line of LED outdoor luminaires.

CONSTRUCTION:

- Powder coat finish
- Pole is shipped standard with pole cap (drill mount only), base cover, anchor bolts and template, hand hole cover, grounding provision/bolt and back bar. Anchor bolts can be pre-shipped upon request.
- MaxLite drilled pattern(s) fits the QMP, MP-AR and the AR series and will be provided on 4 sides, with button plugs.
- Anchor bolt diameter, length, and psi will only withstand load limitations listed (in specifications table) - Contact MaxLite for custom poles order.
- Review installation instructions for mounting template details and detailed hardware list.
- BAA Compliant

WARRANTY:

- 3-year standard warranty (further details available at www.maxlite.com/warranties)
- MaxLite is not responsible for the structural integrity of the system if anchor bolts are supplied by others.

Service & Handling

Poles

MaxLite® Poles - Service & Handling

Shipping and Handling:

Typically, poles will be delivered on a flatbed truck. Reconsignment of a shipment may result in additional charges that will be the responsibility of the customer.

- It is the contractor's responsibility to offload the poles, using a forklift or crane.
- Never lift a pole by inserting a fork through the end of the pole shaft.
- Unloading delays may result in additional charges to be billed to the customer.
- Hardware, unless pre-shipped, is typically sent with the poles, in a separate box.

Inspection:

- Upon delivery, it is imperative the pole wrapping is removed.
- The contractor must thoroughly inspect the poles and ensure all items were delivered without any damage during transit.
- Any shortages or damages must be noted on the delivery receipt / Bill of Lading so that it can be claimed and filed properly with the freight company.
- Be certain to open, inspect, and count all hardware.

Storage:

- Remove all blue wrap and cardboard.
- If possible, store poles inside, away from the elements.
- Poles must be kept off the ground and not submerged in snow or water.
- Separate layers of poles with padded dunnage (dry, untreated wood).
- Generally, it is best to alternate poles top to bottom and bottom to top.
- Make sure that the dunnage is directly in line to one another to apply equal pressure on the poles.

Non-Compliance:

- Wrapping left on the pole may result in damage to the appearance of the finish.
- Cardboard may allow water to be trapped and condensation to build — causing staining.
- Wet dunnage and dunnage with a chemical makeup may result in damage to the finish.
- Unequal dunnage distribution may result in bending and/or warping of the pole.

Field Drilling:

- All holes are drilled and mounting provisions are welded to the pole prior to the powder coat finish.
Drilling the pole in the field exposes the steel, can lead to rust, and is not covered under the warranty.
